

Precision Rolled Ball Screws

PR Series/LPR Series

Compact ball nut heralding in the next generation standard.
Extended maintenance free operation with NSK K1®
lubrication unit and new grease retaining seal.
Suitable for high speed and long stroke operation.

A 25% reduction in the ball nut diameter compared to the current series

No backlash, high speed and long stroke operation is possible. Extended maintenance free operation achieved with **NSK K1**[®] lubrication unit and new grease retaining seal, thus contributing to total cost reduction.

Compact ball nut

- Saves assembly space
- Suitable for rotating ball nut applications because of its low inertia and balanced design

Remarkable improvement in sealing performance (introduction of grease retaining seal)

- Grease retention capabilities substantially enhanced
- Assists clean environment maintenance due to minimum grease scattering
- Superb sealing capabilities in contaminated environments

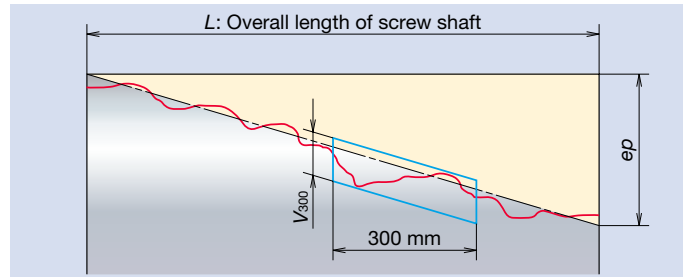

Maintenance free (equipped with NSK K1[®] lubrication unit as a standard feature)

NSK K1[®] lubrication unit, that is molded from resin and is impregnated with lubrication oil, supplies fresh oil onto the ball rolling surfaces. In unison with grease it retains the lubricating ability for an extended period of time. Since its first appearance on the market in 1996, it has been widely accepted in many industrial fields.

Accuracy grade

Accuracy grades of Ct5 and Ct7 are available.

Grade	Ct5	Ct7
ep : Tolerance on specified travel	$ep = \frac{2 \cdot L}{300} \cdot V_{300}$ (mm)	
Travel variation in a 300 mm range (anywhere in useful travel)	0.023 mm	0.052 mm

Options

Support unit (sold separately)

NSK provides the support bearing units to accompany the ball screw shafts.

For further details, please refer to the NSK catalog: Precision Machine Components (CAT. No. E3161).

The bearing journal configurations of the screw shaft are provided on the following pages.

Applications
Woodworking machines, general transporting equipment, feeders, robots, etc.

1. Precision Rolled Ball Screws PR Series/LPR Series

1.1 Specification number

For ordering, please quote the specification number.

Reference number: **H S P 40 40 K 1 D 2002 S A1**

Accuracy grade and axial play
HSP (Ct5, axial play 0 mm)
VSP (Ct7, axial play 0 mm)

Screw shaft diameter (mm)

Lead (mm)

K: Equipped with NSK K1 unit
N: No NSK K1 unit
(Equipped with grease retaining seal only)

Number of nut

Bearing journal for fixed support side: please refer to the configuration of the screw shaft end outlined in the catalog.

Bearing journal for simple support side: please refer to the configuration of the screw shaft end outlined in the catalog.

Overall length of screw shaft
If the length is less than 1000 mm, enter 0 to the fourth digit.

Position of ball nut flange
D: Screw shaft drive side S: Opposite to drive side

Screw shaft overall length

Opposite to the drive side

Drive side

1.2 Permissible rotational speed of precision rolled ball screws

We strongly recommend reviewing the allowable speed of the screw shaft.

The allowable rotational speed of the ball screw shall be checked on the following.

- d·N value, which is involved in damaging the ball re-circulation components
(Where, d: shaft diameter measured in mm, N: rotational speed measured in min⁻¹)
- Critical speed of the screw shaft (caused by the resonance of the screw shaft)

● Permissible d·N

Preferably $d \cdot N \leq 150\,000$. Please consult with NSK if your ball screw exceeds the limitation.

● Critical speed

See the chart below. For detailed calculations, please refer to the catalog: Precision Machine Component (CAT No. E3161).

Please consult NSK if the maximum rotational speed exceeds 5 000 min⁻¹, even both the critical speed of the screw shaft rotation and the d·N value are in ranges of the allowable limit.
